Amend the Abstract to read as follows:

A chalcogenide material is formed to a first thickness over the first conductive electrode material. The chalcogenide material includes A_xB_y . A metal layer is formed to a second thickness over the chalcogenide material. The metal layer defines some metal transition thickness for the first thickness of the chalcogenide material such that when said transition thickness is met or exceeded, said metal layer when diffused within said chalcogenide material transforms said chalcogenide material from an amorphous state to a crystalline state. The second thickness being less than but not within 10% of said transition thickness. The metal irradiated effective to break a chalcogenide bond of the chalcogenide material at an interface of the metal and chalcogenide material and diffuse at least some of the metal into the chalcogenide material.
